

Custom Questions App

App Overview

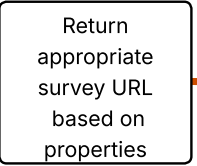

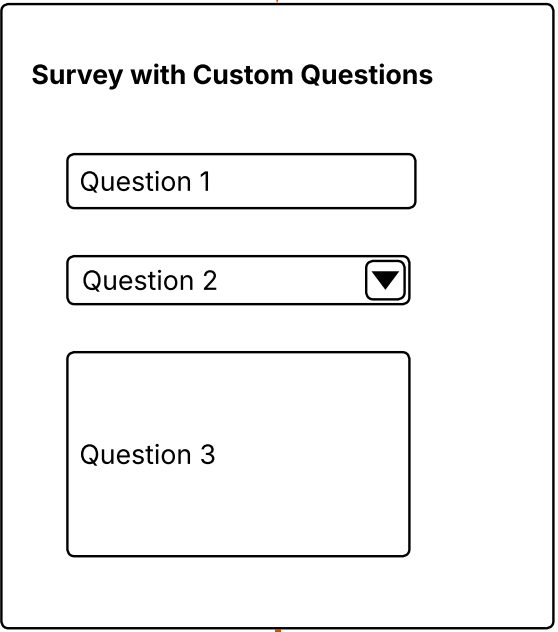

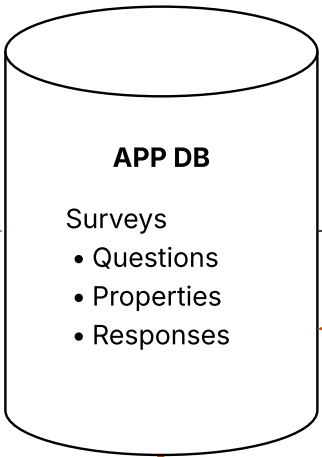

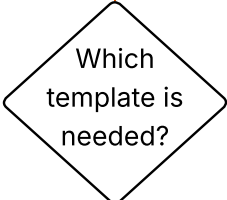

- Greenfield Ruby on Rails App
- Coded via Replit
- Hosted on Heroku
- Distinct user auth. Procurated team will log in to build Surveys for customers.
- Custom Questions App stores a catalog of Surveys created by the Procurated team.
- Published Surveys can be sent to reviewers to collect a survey response.
- Survey responses are captured and stored in the Custom Questions App database.

Survey Builder Functionality

- Surveys are a collection of custom questions.
- Users can create, edit, and delete surveys.
- Surveys can be stored as drafts or published when they are ready to be used.
- Surveys are configured with properties like contract vehicle, contract, supplier, etc. which determines when a review writer should be prompted to fill out a survey.
- When creating a survey, users can configure various types of questions (free form, rating, multiple choice) and indicate whether an answer is required or not.
